Job Title: Web Developer
Location: Lackland, TX (San Antonio)
Security Clearance: Top Secret with SCI Eligibility

E&M Technologies is currently seeking a **Web Developer** in San Antonio, TX.

Responsibilities:
- Web Application Development and Maintenance support on-site primary development languages .NET, C#
- Provide services for evaluation, planning, requirements analysis, design, coding and unit testing, system integration testing, implementation, deploying, providing service to, providing training for, maintaining or updating web-based applications or web-enabling a current system
- Design and develop web User Interfaces (UI) specific to the application using the interface standards already in place and rapid application development principles to achieve a user-friendly interface design utilizing CSS3, JQuery, JQuery UI, and JavaScript
- Design and develop web-based graphics (e.g. banners, icons, buttons, backgrounds, etc.) adhering to standards and style sheets for a unified appearance utilizing Adobe Photoshop
- Perform web server software (e.g. Microsoft IIS, etc.) installation, upgrade, and patch management as required, coordinating with network administrators to minimize impact on users
- Collaborate with Webmasters in the design, development, and maintenance of websites and webpages to facilitate the distribution of IO products and data in a production environment to meet new user needs and respond to/anticipate technological innovations
- Monitor server resources to identify utilization/consumption trends, and projecting when resource utilization/consumption will be such that delivery of services by the servers falls below acceptable performance levels
- Coordinate with the database administrator on database requirements, design and develop the database schema required to meet the requirements of the application, and deploy the database in a production environment
- Coordinate with network administrators on access security requirements required by the Intelligence Community to ensure data security and availability to all participating organizations
- Create and maintain developers' guides and users' guides conforming to the format provided
- Identify and resolve end user problems and concerns during the rapid application development and deployment phases of the application
- Perform daily inspections of applicable logs to ensure web applications are functioning properly
- Assist with certification and accreditation documentation, and assist with maintaining information assurance controls
- Participate in conferences, technical interchange meetings, and user group meetings as a representative of the customer

Position Requirements:
- 7 years of experience in requirements analysis, design, coding and unit testing, system integration testing, implementation, deploying, providing service to, providing training for, maintaining or updating web-based applications.
- 5 years of experience with .NET and C#

- Experience with Adobe Creative Suite, Photoshop, and Captivate
- Experience with Web server software - Microsoft Internet Information Server (IIS) web server version 7.5 or higher
- Experience in supporting industry standard software products (e.g. Perl, PHP, Java, and newer web technologies)

Required Certification:

- Security+

E&M Technologies offers competitive salaries, medical benefits, and a 401k plan.
